TEACHER-GRADED ASSESSMENT

Module Challenge Rubric (16 points)

Applied to the one substantive teacher-graded task in each module. Four criteria, four points each. Kept identical all year so students always know what excellent work looks like.

Criteria	Excellent (4)	Proficient (3)	Developing (2)	Beginning (1)
Understanding of the material	Answers are correct and reflect a secure grasp of the underlying concepts, including edge cases.	Answers are largely correct with minor conceptual slips.	Some correct results but recurring conceptual confusion.	Frequent errors indicating the core idea is not yet secure.
Quality of reasoning	Every step is justified; the correct technique is chosen and its use explained.	Reasoning is sound with small gaps in justification.	Steps appear but the reasoning is thin or partly unjustified.	Answers are asserted with little or no reasoning shown.
Clarity and precision	Clean vertical layout, aligned relations, correct notation, labeled answers and units.	Mostly clear with a few notation or layout lapses.	Work is followable but disorganized or imprecise.	Work is hard to follow; notation is incorrect or missing.
Intellectual honesty	States clearly where confident and where uncertain; distinguishes what is proven from what is estimated.	Generally candid about certainty with minor overreach.	Some claims are overstated relative to the work shown.	Certainty is asserted without support.
			Total	16 pts

> Grading target: about five minutes per student. Click-to-score on the four rows, add one brief comment naming the single most useful next step.

COMMUNITY

Discussion Rubric (simple, batch-scored)

Level	Description	Credit
Substantive	Makes a specific, true claim with concrete evidence, and the reply engages a classmate's actual reasoning.	Full
Thin	Posts and replies, but the claim is vague or the reply is only agreement.	Partial
Missing	No post, or no reply to a classmate.	Zero

> Read in batches; drop two or three public comments that model good reasoning or correct a common confusion.

PRACTICE

Weekly Problem Set (completion)

- **Full credit:** every problem attempted, work shown (tables, steps, or reasoning), final answers labeled.
- **Partial:** most problems attempted with visible work.
- **No credit:** answers only with no work, or largely blank.

Problem sets build fluency; they are scored on effort and completeness rather than on every answer being correct. Use the answer keys for spot checks and to spot class-wide misconceptions.

IMMERSIVE

VR Activity (completion)

- **Full credit:** the required in-world work is completed (markers or IFX placed, whiteboard recorded), and the required artifact is submitted (a named snapshot plus a short spatial recording or written reflection).
- **Partial:** the session was completed but the submission is incomplete.
- **No credit:** no submission.
